

Relational Database Design — Normalized ERD

Walmart pet products, customers, transactions, and shipments

Design / normalization notes

- Product holds common attributes; PetFood, PetToy and PetApparel store type-specific attributes.
- ProductAnimal resolves Product–Animal many-to-many relationship.
- TransactionItem resolves Transaction–Product many-to-many relationship.
- ShipmentItem resolves Shipment–Product many-to-many relationship and stores quantity.
- Shipment references Location twice: origin and destination.
- Manufacturer is separate to avoid duplication.
- PK = primary key; FK = foreign key.
